

Our Field Information System increases accuracy and efficiency by streamlining and reducing redundancy in processes

Operations & Field Management

1. Daily project information reporting to include time spent on the job site
2. Project production data including number of items inspected, specificity of inspection, and location of items inspected
3. KPI reports customized to your protocol (i.e. daily welds inspected, downtime, welds created per welder)
4. Fully integrated access to information: a complete partnership with NVI provides you with complete access to information collected during the partnership (i.e. cost data, weld details, etc.).
5. Project completion percentage

QA/QC

1. Tracking and clear reporting of rejected and repaired welds
2. Discontinuity trends by welder, job site, supplier, vendor
3. Import and export complex welding/drawing numbers—eliminate typos, transposed numbers and other errors that may occur by importing and exporting complex welding/drawing numbers directly from your database to ours and vice versa
4. Assurance that procedures are systematically updated and communicated to the end user
5. Latest industry codes, procedures and recommended practices are instantly viewable by the end user
6. Complete quality and safety management functionality of KPI and NCR management

Supply Chain

1. Faster and more accurate billing
2. Instant PO and AFE tracking with custom budget overage notification
3. Logic enabled to ensure overtime, standby, and work delay compliance

Safety

1. Reporting of real-time behavioral observations and customized alerts when immediate action is required
2. Metrics including percentage of compliance of JSAs and regulatory procedures

Done Right.
