

DONE RIGHT.

NVI Nondestructive
& Visual
Inspection

NVI is an industrial solutions provider for companies with high-stakes infrastructures.

We provide unrivaled reliability and customer service by being fast, flexible, and accurate.

Our Promise to You: Excellence and Trust

“At NVI, our commitment is unwavering: to consistently deliver expert, dependable results, time after time. We understand the importance of reliability and in-depth knowledge in fostering long-lasting relationships. As your dedicated partner, we aim to earn your trust through our steadfast dedication to excellence, ensuring that we are a reliable cornerstone for all your needs.”

- Jason Caruso, President & Chief Executive Officer

NVI strives to help companies plan, inspect and document infrastructure build-outs and maintenance, enabling safe, compliant, and efficient operations. We deliver our NDT techniques with a passionate commitment to exceptional customer service that many NDT providers simply cannot match.

That's what we call Done Right.

LEADERSHIP

Backed By The Best

Here at NVI, we continually invest in our people, processes, and equipment. As a result, we deliver the most effective solutions wherever they're required, whatever the schedule, and do so in the safest manner possible. We believe that leadership, through its example, sets the tone for the organization. Our seasoned leadership team constantly seeks ways to provide project-specific inspection solutions while setting the standard for quality, safety, and service.

Industries

Enhancing Safety & Reliability in Diverse Markets

NVI serves diverse industries with specialized NDT solutions that enhance safety, reliability, and compliance. From pipeline integrity to construction and fabrication, we ensure structural soundness. Our adaptable methods address the unique challenges of each market, delivering precise, timely inspections that detect flaws without causing damage or altering functionality—preventing accidents, reducing downtime, and extending equipment service life.

Services

What we Offer

We provide industrial NDT solutions catering to companies with critical infrastructure needs. At NVI, we are committed to delivering unparalleled reliability and exceptional customer service through our speed, adaptability, and precision. We persistently invest in our workforce, methodologies, and technology to ensure that we provide the most efficient solutions, regardless of location, timeline, or complexity, while maintaining the highest safety standards.

Conventional NDT

Reliable and Efficient Inspection Services

At NVI, we specialize in providing reliable and efficient NDT services. Our commitment to excellence ensures that our clients receive the most accurate and timely assessments, minimizing downtime and maximizing safety. Utilizing the latest in NDT technology, our skilled technicians conduct inspections and evaluations, detecting even the most subtle anomalies and irregularities. From Radiographic to Ultrasonic Testing, our methods are designed to meet diverse industry needs while adhering to the highest standards of quality and safety.

Methods of Inspection

- | | | | |
|---|------------------------------|---|--------------------------------|
|  | Visual Testing (VT) |  | Magnetic Particle Testing (MT) |
|  | Electromagnetic Testing (ET) |  | Liquid Penetrant Testing (PT) |
|  | Guided Wave (GW) |  | Radiographic Testing (RT) |
|  | Leak Testing (LT) |  | Ultrasonic Testing (UT) |
|  | Magnetic Flux Leakage (MFL) | | |

Advanced NDT

Revolutionizing Inspections

Advanced nondestructive methods use sophisticated equipment and technology for faster, more precise, and cost-effective inspections, resulting in improved safety and reduced downtime. NVI's cutting-edge NDT services ensure compliance with all relevant codes, standards, and company-specific requirements.

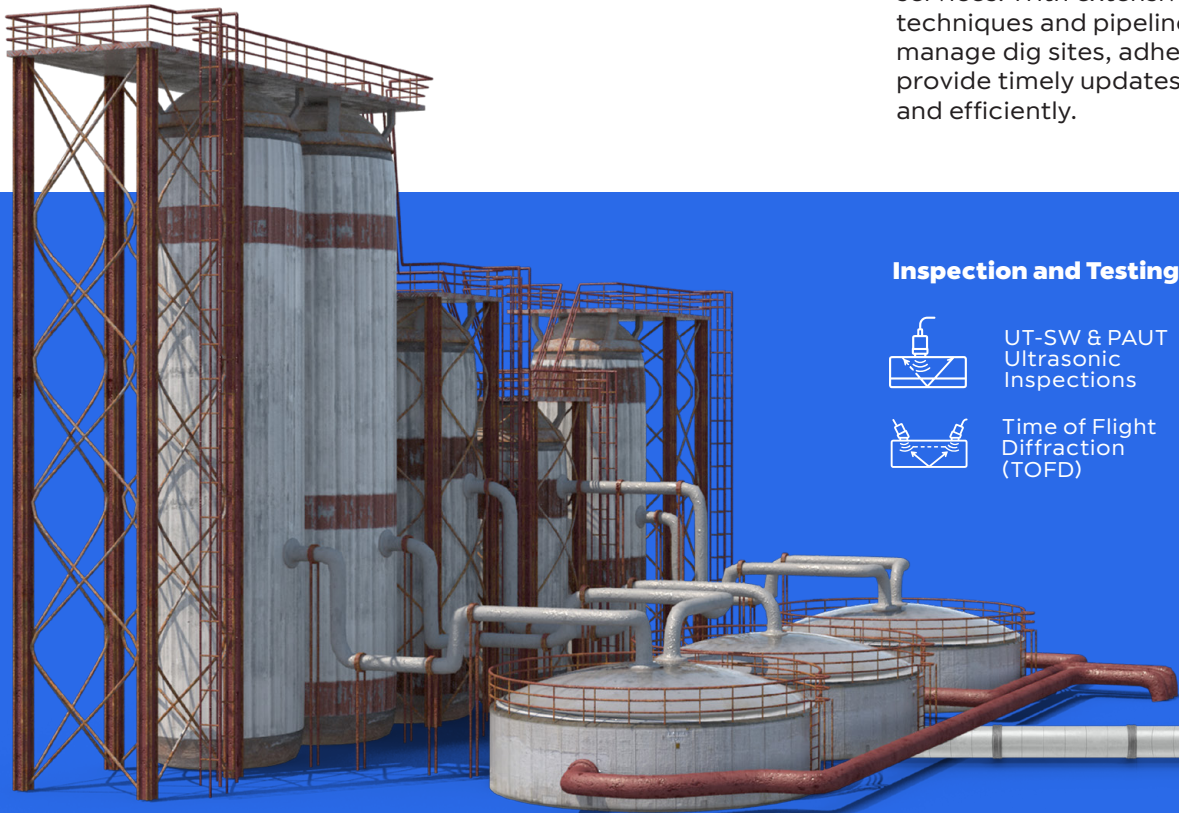

Methods of Inspection

- | | | | | | | | |
|---|--|---|--|---|---------------------------------------|--|-----------------------------------|
|  | X-Ray Pipeline Crawlers |  | Computed Radiography / Digital Radiography |  | Automated Corrosion Mapping |  | Electromagnetic Testing |
|  | Phased Array Ultrasonic Testing (PAUT) |  | Positive Material Identification (PMI) |  | Metallurgical Services |  | Welder Qualifications |
|  | Full Matrix Capture / Total Focus Method |  | SmartRT |  | Alternating Current Field Measurement |  | Time-of-Flight Diffraction (TOFD) |
|  | Leak Testing |  | Creaform 3D Laser Scanning |  | HydroForm / FlexoForm | | |
|  | MsS Guided Wave |  | Magnetic Flux Leakage |  | Automated Ultrasonic Testing (AUT) | | |

Mechanical Asset Integrity

Innovative Solutions for Operational Efficiency

Our diverse Mechanical Asset Integrity management team has experience in both major onshore and offshore facilities, ensuring compliance with all regulatory bodies and industry code requirements such as PSM, OSHA, BSEE, PHMSA, National Board, API and ASME. Our project management personnel are well equipped to manage any project, no matter the scale. Beginning with a baseline inspection, which serves as a reference point for future evaluations and maintenance activities. All resulting in decreased maintenance costs, enhanced reliability of production processes and minimal project downtime.

Assessment and Inspection Methods

- | | | | |
|---|---|---|--------------------------------------|
|  | Conventional NDT |  | API 570 - Process Piping Inspection |
|  | Advanced NDT |  | API 653 - Above Ground Storage Tanks |
|  | API 580 / 581 Risk-Based Inspection |  | STI SP001 - Steel Tank Institute |
|  | API 650 - Welded Tanks for Oil Storage |  | Corrosion Under Insulation (CUI) |
|  | API 579 - Fitness-For-Service evaluations |  | Atmospheric Corrosion Inspections |
|  | API 510 - Pressure Vessel Inspection |  | Rope Access Enabled Services |

Pipeline Integrity

Delivering Quality and Accuracy

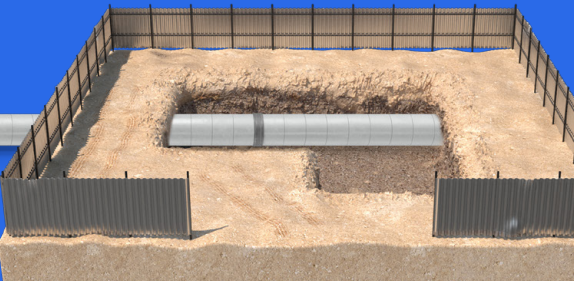

Our Pipeline Integrity division serves leading pipeline operators with fast, flexible, and accurate inspection solutions. By investing in advanced technology and industry-leading training, our skilled technicians deliver comprehensive, cost-effective, and reliable inspection services. With extensive expertise in advanced NDT techniques and pipeline operations, they efficiently manage dig sites, adhere to your procedures, and provide timely updates to keep projects moving safely and efficiently.

Pipeline Integrity Assessments

- | | | | |
|---|---|---|---|
|  | External Corrosion |  | Stress Corrosion Cracking |
|  | Internal Corrosion |  | pH Measurements |
|  | ILI Tool Validation |  | Microbial Induced Corrosion Evaluations (MIC) |
|  | Remaining Strength Calculations (RSTRENG) |  | Dent and Mechanical Damage Assessment |
| | |  | Cathodic Protection Pipe to Soil Readings |

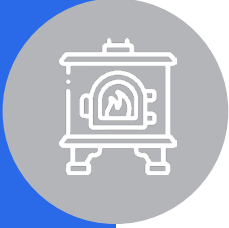

Inspection and Testing Techniques

- | | | | | | | | | | |
|---|-------------------------------------|---|--|---|--------------------------------|---|-----------------------------|---|--|
|  | UT-SW & PAUT Ultrasonic Inspections |  | Positive Material Identification (PMI) |  | Magnetic Particle Testing (MT) |  | Automated Corrosion Mapping |  | Full Matrix Capture (FMC) / Total Focus Method (TFM) |
|  | Time of Flight Diffraction (TOFD) |  | Weld Inspections |  | Guided Wave |  | Creaform Laser Scanning |  | Coating Evaluation (NACE) |

Heat Treatment

NVI offers versatile heat treatment services, both onsite and offsite, tailored by our skilled engineers. This saves clients time and money. Welding can cause harmful residual stress in metals, leading to reduced durability and risks like cracking and stress corrosion, especially under high temperatures and pressures. To counter this, NVI uses post-weld heat treatment, which involves heating, holding, and controlled cooling of the weld to restore the metal's properties. We provide onsite services with various furnace sizes and localizing units, offering pre-heating, post-weld heat treatment, solution annealing, and tempering.

Service Offerings

- | | |
|--|--|
|  Preheat and Stress Relieving |  Line Thawing |
|  Post Weld Heat Treatment |  Refractory Curing / Dry-Outs |
|  Normalizing |  Coating Cures |
|  Bake-Outs |  Vessel Firings and Portable Furnaces |
|  Fixed Based Furnaces |  Mobile Combustion Units |
|  Self-Contained Mobile Rigs | |

Heat Treatment

At NVI, we excel in adaptable heat treatment methods, offering both on-site and off-site solutions. Our technicians craft customized off-site plans for on-site implementation, saving our clients time and money. Our dedication to innovation and investment in our staff and systems ensures our clients' future success.

Off-Site Furnaces

We offer a variety of heat treatment services for any need. We have the capability to bring a mobile furnace to your location, or you can transport your equipment to one of our 11 locations.

Mobile On-site Capabilities

NVI offers generator-powered mobile units with automated controls and the essential ancillary equipment for jobs at any facility or within a fabricated furnace. Our systems accommodate up to 30'x6'x5' insulated panels and are powered by propane, natural gas, 110VAC, or diesel burners. By leveraging our expertise, we can reduce clients' post-weld heat treatment and stress-relieving expenses.

Marine NDT

NVI is an authorized provider of class inspections and hull diminution surveys for IACS members, such as ABS, Lloyds Register, DNV-GL, and ClassIBS.

Comprehensive Industry Affiliations and Expertise

With nearly 2 centuries of combined experience, NVI's Marine Division leaders know how downtime hurts your bottom line. Our wide range of services are provided by certified technicians who are trained to work safely and effectively in any scenario.

NVI is a member of the PEC, Avetta, Veriforce, DISA, NCMS, OQSG, and ISNetworld.

Featured Services

|  Drone Inspection |  Propeller & Shaft Inspection |
|  Anchor Chain Inspection |  Offshore Vessel Load Outs |
|  Project Management of Marine Inspections |  USCG Sub Chapter M |

NVIsion

NVI offers a unique proprietary software, NVIsion, which is a program that is completely customizable to client specifications and offers real-time reporting and information.

We developed our Field Information System with the goal of enhancing accuracy and efficiency in processes. The software was designed to minimize redundancies, resulting in a more streamlined and effective workflow.
