

# Mobile Radiography DONE RIGHT.

## Revolutionizing Onsite Radiography

At NVI, we understand that no two job sites are the same. That's why we're investing in next-generation mobile radiography trucks that seamlessly integrate Digital Radiography (DR) and Computed Radiography (CR) in a single unit. This upgrade eliminates downtime caused by unforeseen onsite challenges, allowing our technicians to adapt instantly and keep projects on schedule.

## Why CR + DR Combined Matters

Traditional DR-only trucks are ideal for high-production inspections, but complex geometries, tight spaces, or last-minute scope additions often require flexible CR imaging plates. Instead of halting work and mobilizing additional crews, NVI's dual-capability trucks allow technicians to make the right technical decision on the spot—without delays.

### Key Benefits to Clients:

- No stoppages due to site issues
- Fewer mobilizations, lower costs
- Single crew efficiency
- Real-time DR feedback with the flexibility of CR for complex areas

## Potential Use Case Benefits

NVI's combined CR/DR trucks maximize efficiency across various job scenarios. During a pressure vessel turnaround, technicians can quickly inspect long circumferential welds with DR, then switch to CR for complex nozzle-to-shell connections—all in one deployment.

In a pipeline integrity dig, crews can complete planned DR inspections and immediately handle unexpected small-bore areas with CR, avoiding costly delays and keeping projects on schedule.

## Raising the Standard for Radiography

This strategic investment gives our skilled technicians complete autonomy to adapt to the realities of the job site. It enhances operational efficiency, improves safety by reducing onsite exposure, and reinforces NVI's reputation as a proactive, problem-solving partner—not just a service provider.

With NVI's new CR/DR trucks, you're getting more than just equipment. You're getting a comprehensive radiographic solution that keeps your operations moving.
