

The conventional NDE industry-proven nondestructive testing techniques are commonly applied to determine code or specification compliance. The key differentiator in conventional NDE is the expertise of the technician.

NVI has a vast team consisting of SNT-TC-1A Level II Radiographers, Ultrasonic Shearwave, Magnetic Particle, and Dye Penetrant Inspectors. They are certified or accepted by a wide range of governing bodies, including DNV, ABS, IBS, Lloyds, PED, NOV, API, AWS, and ASME.

NVI can prepare procedures to client-specific requirements and implement them rapidly thanks to the presence of our Level III - ASNT certified personnel. Our Level III technicians enable us to offer third-party services that include: training, certifying, procedure preparation, and auditing.

Conventional NDE Services

- Ultrasonics
- Radiography
- Magnetic Partical Inspection
- Dye Penetrant
- Electromagnetic Testing
- Visual Inspection

NVI is a worldwide industrial solutions provider for companies with high-stakes infrastructures. We provide reliability and excellent customer service by being fast, flexible, and accurate.
